

Products

The racks are made from strong cardboard making this the ultimate ecological solution. They are made to be as flexible and “bending” as possible. However, with direct pressure the cardboard will break. This will not shorten the lifetime of the product. The surface can take some moisture and can be cleaned by e.g. ethanol.

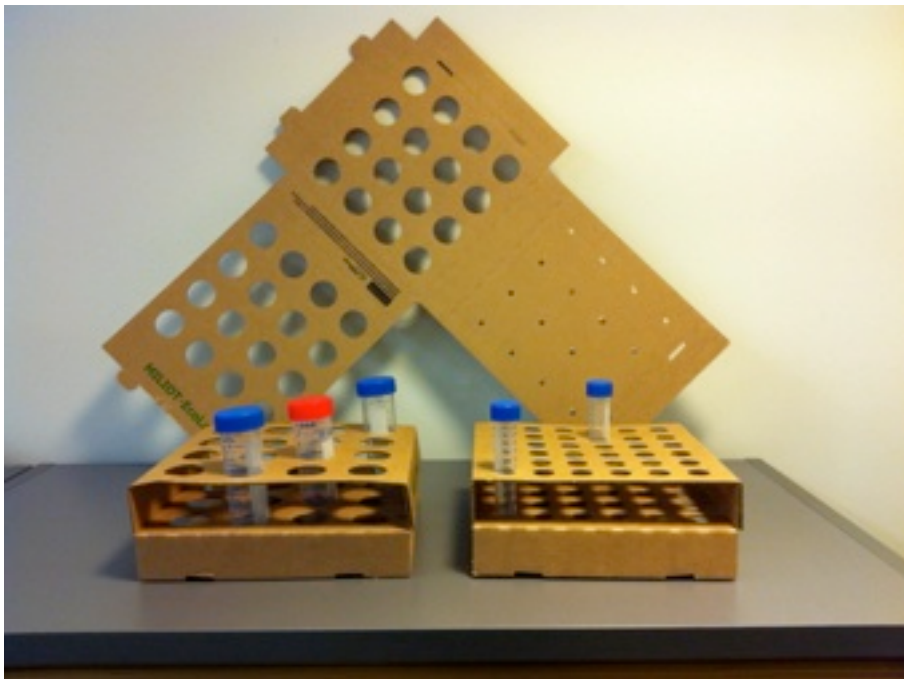

50ml tube rack and 15ml tube racks from the front. The racks for 10-12ml tubes are practically identical to the 15ml tube racks, but with 2mm smaller diameter of holes for a tighter fit. Behind the assembled racks is shown how the racks are shipped. This makes shipment costs minimal and assembly takes ca 20 seconds.

MILIOT SCIENCE

The backside of the racks, with the logo of Miliot Science and our co-developer Annahouse.

The racks from one of the sides. Please notice that on both sides the end user has plenty of room to write on. This is also the case on the top of the rack, thus enabling both numbering and naming.
